

The Figure Skate Company

HIGH PERFORMANCE BLADES

TECHNOLOGY IS OUR EDGE

To allow for a seamless transition between models as skaters improve and graduate up the line, we realigned our blade structures into the following families:

CROSS CUT PICK FAMILY

- Advanced Pick Symmetry - sharper teeth
- Best grip for high torque, fast rotating jumps
- Best for skaters that 'spin' into the air

STRAIGHT CUT PICK FAMILY

- Standard for learning jumps
- Greatest allowance to pivot after picking
- Best for high-kick lutz and flip jumpers
- Most forgiveness to allow rotation

7' ROCKER FAMILY

- Less blade contact with the ice surface allows for quicker transitions and higher lift angle
- Enhances maneuverability required in Dance, Synchro, and Freestyle disciplines

FREESTYLE FAMILY

- Incorporates Cross Cut Pick design
- 8' Rocker provides less slip and better grip for those who need extra aggression for jumps
- Allows for quick kick to the toe pick
- Graduation through the family allows for more aggressive toe picks and lift angles
