

# JACKSON SCANNING TECHNOLOGY

Introducing  
Jackson Scanning  
Technology!

TechMed 3D

## Take the guesswork out of sizing your Jackson Boots!

- The sizing process is simple to use.
- Scanning shows 3-D view of the skater's foot so lasts can be modified if required, providing better customization.
- Measuring is consistent from Skate Tech to Factory to yield consistent, accurate fit.
- Digital imaging accelerates rapid turnaround of your custom boots and your fit shape is retained on file.
- Accurate measuring process combined with Jackson's Heat Moldable Fit System provides a superior fit with stock sizes.
- This scanning system is also used in the very sensitive medical industry for prosthetics and body scanning where accuracy is critical.
- Software is developed for Jackson Skates by TechMed 3D, a Canadian company providing the best human body scanning system on the market.

# THE JACKSON CUSTOM BOOT PROGRAM

## Instant Custom – Minutes!

Your authorized Skate Technician utilizes Jackson's Heat Moldable System and in-store techniques to custom fit a stock Jackson boot appropriate for the skater's needs.

Custom Fit in Minutes

### HEAT MOLDABLE FIT SYSTEM

Jackson stock boots utilize advanced microfibers that are lighter, stronger and enhance the boot's Heat Moldability. We design boots to fit tight when cold. Stock boots from many of our competitors simply cannot offer the **CUSTOMIZED FIT** available through Jackson's **Heat Moldable Fit System**. With Jackson, your Skate Technician uses heat to soften and stretch the boots. As the boot cools, it retains the shape of your foot.

### SUPREME SHOCK ABSORPTION

Jackson's proprietary sole options are combined with the Matrix Poron Footbed. Experience our enhanced Boot Platform that delivers improved stability and superior shock absorption. Tradition meets Innovation.

### JACKSON WRAP SYSTEM FEATURING PERFORMANCE FLEX NOTCH

Looking for superior stability and support with maximum flexibility? Better Design for Superior Fit and Performance.

### JACKSON SUPPORT RATING SYSTEM

Designed to ensure that skater are fitted with the appropriate support for their level of skating. *Fit to Perform.*

Fit to Perform

## Rapid Custom – 2-4 weeks

Jackson can, in certain cases, build a Custom Boot from a stock boot upper. Rapid Custom is often an effective, time-sensitive and cost effective solution.

### BUNION/ANKLE PUNCH OUTS

A Jackson team member can modify the fit characteristics to accommodate variations in the skater's foot.

### NARROW/WIDE

By using a wider or narrower last, the upper can be shaped to the desired fit by our manufacturing team.

### TONGUE OPTIONS

We offers a variety of tongue options; Jackson removes the stock tongue and inserts the desired tongue.

### SOLE OPTIONS

Jackson offers three sole designs; LCF, LCL and Fusion soles. Five colors are available in the Fusion sole. The Jackson team will build your boot with the sole of your choice.

## 5000 Series Custom – 6-8 weeks

In certain cases, a Full Custom is required to effect an appropriate solution. The Jackson team will build your boot from scratch based on specifications supplied by your Skate Tech. Jackson 5000 Series Custom Boots offer a full array of specifications that can't be offered through our Rapid Custom Boot Program.

### NON-STOCK MATERIAL

- Leather of various weights and colours
- Coloured High Performance Microfiber

### NON-STOCK UPPERS

Upper patterns not available as a stock upper.

### BOOT WIDTH

Choose from AAA to EEE Width.

### CUSTOM CRYSTALS

High Grade Swarovski crystals can create a unique look.

### SOLE & TONGUE CHOICE

Select from our LCF, LCL and Fusion Sole. Select the density and design of the tongue.

### PERSONALIZATION

From Jackson Custom to you.

Your Authorized Jackson Skate Technician can explain the options and order the correct specifications. On delivery, they will Heat Mold and ensure the result meets your requirements.
